EXPERIENCE

Nvest

Jun. 2026 – Present

Technical Business Analyst

Mumbai, Maharashtra, India

- Bridge business and Tech by translating product requirements into **database and application-level changes**.
- Configure and debug product setups in **BI tools and production databases using SQL**, ensuring data integrity.
- Troubleshoot **C# and JavaScript** issues and work with engineers to identify root causes and solutions.
- Work across **product, data, engineering, and client-facing technical delivery**.

SNIG UK LIMITED

Nov. 2025 – May 2026

Full Stack Developer

London, UK · Remote

- Shipped end-to-end features across a **website and app**, working across frontend and backend services.
- Built and maintained **REST APIs** with data validation and business logic for core product functionality.
- Translated product requirements into working software within a distributed remote team.

AbleSpace – IEP Goal Tracking App

Oct. 2025

Web Scraping Engineer

San Francisco Bay Area · Remote

- Built **TypeScript data pipelines** to scrape, structure, and feed data into the application's database and website.
- Automated manual data collection workflows, improving **pipeline reliability and efficiency**.

PROJECTS

vAk – GPT-Style Language Model Trained from Scratch

[GitHub](#) | [Live](#)

- Built a decoder-only transformer, BPE tokenizer and training loop from scratch in **PyTorch**; trained a 3.1M-parameter model to **perplexity 5.6** on held-out text.
- Compared two model sizes on the same held-out data (1.1M vs 3.1M parameters, perplexity 9.0 vs 5.6).
- Ported inference to **plain JavaScript with a KV cache** (no ML libraries), verified against PyTorch on every page load; the live demo shows the model's next-token probabilities for every word it writes.

MailPilot AI – LLM-Powered Email Automation

[GitHub](#) | [Live](#)

- Designed an **LLM-powered agentic workflow** for email summarization, reply generation, drafting, and automated actions.
- Built a full-stack AI system with **Google OAuth 2.0** and secure Gmail access using token-based authentication.
- Implemented a **FastAPI** backend for Gmail APIs and LLM calls with a **Next.js** chat interface.

FinRisk ML – Credit Risk Scoring System

[GitHub](#) | [Live](#)

- Built an end-to-end credit risk system combining **logistic regression and rule-based decision logic**.
- Developed a **FastAPI backend** with JWT authentication, User/Admin RBAC, and PostgreSQL using SQLAlchemy.
- Built a **React.js frontend** with loan workflows, score visualization, and an admin analytics dashboard.

EDUCATION

Chitkara University, Patiala

2022 – 2026

Bachelor of Technology in Software Engineering

Patiala, India

- **CGPA: 8.0/10**

SKILLS

AI/ML: PyTorch, Transformers, LLM API Integration, Prompt Engineering, Agentic Workflow Design, Workflow Automation

Languages: Python, Java, JavaScript, TypeScript, C#, SQL

Frontend: React.js, Next.js, HTML, CSS, Tailwind CSS

Backend: Node.js, Express.js, FastAPI, REST APIs, JWT Authentication

Databases: MySQL, PostgreSQL

Tools: Git, GitHub, Postman, Vercel, Render, Jira, Agile (Scrum), BI Tools
